

TO WHOM IT MAY CONCERN

Stoomwezen B.V. is a recently privatized organisation specialised in inspection and certification of Pressure Equipment.

Mr. W.H. Voorhaar worked for our company from May 1995 until March 1998 at the Central Appraisal Department (CBA).

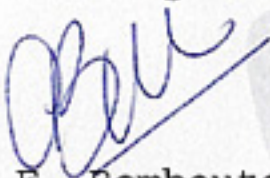

When Mr. Voorhaar started at CBA his job was assessing high temperature piping systems according to the Dutch Rules.

It was clear from the beginning that he was highly experienced and had a lot of knowledge of the subject. Especially his knowledge of a pipestress computerprogram like P-10 was highly developed. He also proved to be familiar with several other computerprograms and their application. When there were non-standard problems to solve Mr. Voorhaar was able to find his way through literature and - if necessary - develop new methods (computerprograms).

After a while Stoomwezen asked Mr. Voorhaar to apply himself to the assessment of buried pipelines according to the Dutch standard NEN 3650. This topic is not an easy one, but Mr. Voorhaar was able to specialize without much support from others.

At that time Stoomwezen was engaged on the process of complying with EN 45004. Mr. Voorhaar was able to contribute a lot concerning pipelines.

We know Mr. Voorhaar to be a hard working and pleasant colleague.

E. Rombouts
